PRODUCT OVERVIEW

The RP052 Rigging Pulley has hot Forged side frames, combined with high quality materials and components. The RP052 is rope friendly, durable and extremely robust. These features combined give maximum security and strength, when the block is rigged as part of an impact system.

Apart from the aesthetically pleasing curves, the ISC impact pulley is designed to work (together with textiles) to absorb the huge forces which are created by the harsh dynamics of heavy Arborist work. The side plates are produced using the best quality hot forged Aluminium and the special manufacturing process allows these pulleys to offer a highly impressive strength to weight ratio.

TECHNICAL INFORMATION

Part Code	RP052
Weight	1.64kg (3.6lbs)
Dimensions	180 x 100 x 108 Width (7 x 3.9 x 4.25")
Working Line Rope \varnothing	20mm (3/4")
MBS	100kN (22480lbf)
WLL	2000kg (440lbs)
Material/Finish (housing)	Aluminium/Anodised
Standards	CE Machinery Directive 2006/42/EC
