RT305A1
Chipmunk FLEX 9" Tether,
supplied with Accessory
Karabiner

KT305A1
Chipmunk FLEX 9" Tether,
supplied with APEX &
Accessory Karabiner

Chipmunk FLEX 9" Tether
Cordage & Hitch configuration
shown for illustration, only.

PRODUCT OVERVIEW

Introducing the Chipmunk, the new addition to our tether range. The Chipmunk FLEX measures 9", which is 3" shorter than the original Squirrel FLEX Tether. The short Chipmunk tether allows users to reduce the overall height of their SRT climbing system. A compact climbing system allows climbers more reach-space above the system, therefore enabling longer arm strides and greater efficiency during ascent.

Just like the original Squirrel FLEX Tether, the Chipmunk is constructed from high quality, durable rope with an advanced Polymer over-mould, to create a super-rigid tether, with just the right amount of flex!

The Chipmunk FLEX has sewn eyes which offer a snug fit, firmly holding the Karabiner, in order to maintain stiffness in the system. The Chipmunk FLEX has a central connection point that allows for connection to a chest harness, using the KL100 Accessory Karabiner (supplied).

TECHNICAL INFORMATION

Part Code	RT305A1	KT305A1
	Chipmunk FLEX 9" Tether, with Accessory Karabiner	Chipmunk FLEX 9" Tether, with APEX Wrench & Accessory Karabiner
Weight	85g (3oz) [105g (3.7oz) including Accessory Karabiner]	262g (9.2oz) [282g (9.9oz) including Accessory Karabiner]
Type	Twin-leg	
Compatibility	ISC APEX/ISC Rope Wrench (all ISC models) RP282 ISC PHLOTICH Pulley	
Tether Length	225mm (9")	
MBS	24kN (5395lbf)	
Standards	Tether ANSI Z133
